PROFESSIONAL SUMMARY

- Currently pursuing my final year of M.Sc. Software Systems, specializing in Data Science, Machine Learning and AI. I have hands-on internship experience combining software development with data analysis. Skilled in data gathering, predictive modeling, and modern web tools, I am eager to bring my skills to a fast-paced team.

EDUCATION

- **Bharathiar University, KG College of Art and Science**
Master of science in software systems (70.4%) *Aug 2022 - May 2027*

SKILLS SUMMARY

- **Technical Skills:** Python, SQL, Data Science, Machine Learning and AI, Html, Css
- **Soft Skills:** Problem Solving, Teamwork & Collaboration, Result-Driven

INTERNSHIPS

- **Devtown (online)**
Data scientist (Machine Learning and AI) *May 2024 - July 2024*
 - **Skill Development:** I have learned Data Science, including Python, NumPy, pandas, SQL and Machine Learning.
 - **Project Implementation:** I built hands-on projects using pandas, machine learning and deep learning techniques.
 - **Practical Application:** Worked on these projects helped me turn theory into real problem-solving skills.
- **KG Genius labs**
Data Analyst *Nov 2024 - April 2025*
 - **Data Scraping:** Scraped data from websites using tools like Web Scraper, Apollo.ai, Instant Data Scraper, LinkedIn Scraper, and ParseHub, then cleaned and organized it to ensure accuracy and save the team hours of manual work.
 - **Data Analysis:** Analyzed large datasets in Excel (online and offline) using formulas, pivot tables, dynamic tables, and simple automation to produce regular reports quickly.
 - **Workflow Optimization:** Improved documentation efficiency with Briskine by generating full paragraphs from short keywords, speeding up report writing and data entry.
- **Postulate info tech-pvt**
Data scientist (Machine Learning and AI) *Oct 2025 - Dec 2025*
 - **Team Collaboration:** I took part in group discussions and handled real-time tasks, which improved my communication, problem-solving, and ability to work under pressure.
 - **Research & Analysis:** I built analysis and prediction projects using Kaggle datasets and Git, wrote a research paper on super early detection of retinopathy color blindness (using classification and regression with Excel pivot charts and graphs).
 - **Advanced Modeling:** Created more high-accuracy projects in Jupyter, Colab, and VS Code, visualizing the datasets with PyLab.

PROJECTS

- **Full-Stack Websites:** Built full-stack websites using React, Sql and Node.js through coding competitions.
- **AML Detection System:** Developed an anti-money laundering (AML) detection system using OpenENV, Hugging Face and AI techniques.
- **Relational Engine:** Built a CRDT-based relational engine designed for local-first OLTP applications with real-time sync.
- **Devtown Projects:** Completed hands-on projects in pandas, machine learning, and deep learning during the Devtown online program.
- **Medical Research & Prediction Models:** Delivered analysis and prediction projects using Kaggle datasets, Jupyter and Git; wrote a research paper on super early detection of retinopathy color blindness with classification, regression, and used data visualization process regarding the research papers.

ACHIEVEMENTS

- **Hackmarathon 2k26 - 1st Place** (Feb 2026) Won 1st place in the Smart Healthcare Solutions track at Hackmarathon 2k26 (Feb 2026), a national 24-hour hackathon, with weDonate - a real-time blood donation coordination platform.
- **SRCAS Hackathon 2.0 - 2nd Place** (Dec 2025) Secured 2nd place at SRCAS Hackathon 2.0 (Dec 2025), a national 24-hour hackathon, with WeRespond - an AI-powered emergency response app using AI, React Native and Node.js.
- **Scaler's Anvil Hackathon** Gained more challenging real-time problem-solving experience by competing in the Scaler's Anvil Hackathon, a national 24-hour hackathon.
- **AWS DeepRacer & Hackathons** I consistently compete in national 24-hour hackathons and took part in a 48-hour AWS DeepRacer event, which sharpened my learning into hands-on, result-driven experience.
